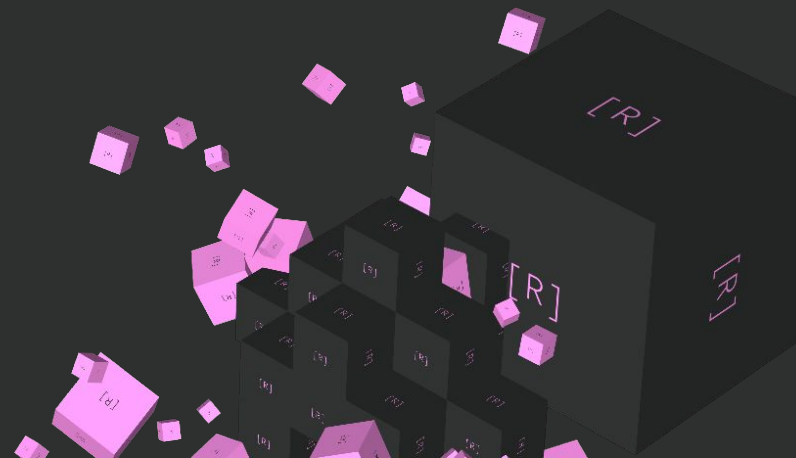
Let's have a look



Find 3 upcoming tech events related to AI that will be in Canada. Include the name of the event, the starting and ending dates, and the URL where I can get more info

Here are **three upcoming tech events in Canada focused on artificial intelligence (AI)** — with dates and links for more information:

1. **Canadian AI 2026 Conference**
   📅 **May 25 – 29, 2026**
   🇨🇦 Vancouver, British Columbia
   📍 A major Canadian AI research and practice conference bringing together AI researchers, industry leaders, and practitioners. caiac.ca
   🔗 More info: https://www.caiac.ca/en/conferences/canadianai-2026/home ↗ caiac.ca
2. **AI in Communications Summit – Canada**
   📅 **February 26 – 27, 2026**
   🇨🇦 Vancouver, British Columbia
   📍 A focused summit on how AI is transforming communications strategy and practice, with sessions and case studies. thepworld.com
   🔗 More info: https://www.thepworld.com/event/ai-in-communications-summit-canada ↗ thepworld.com
3. **AI & Data Summit 2026 Toronto**
   📅 **March 5, 2026**
   🇨🇦 Toronto, Ontario
   📍 A one-day summit for senior tech and innovation leaders on how AI and data strategies are transforming business. event.idc.com
   🔗 More info: https://event.idc.com/event/ai-data-summit-toronto/ ↗ event.idc.com

Would you like me to include a few *smaller or academic AI workshops and conferences* happening in Canada this year too?

reka

Valid information

Avoid hallucinations by confirming the information

Structured

Structured output, with strong time, no noise.

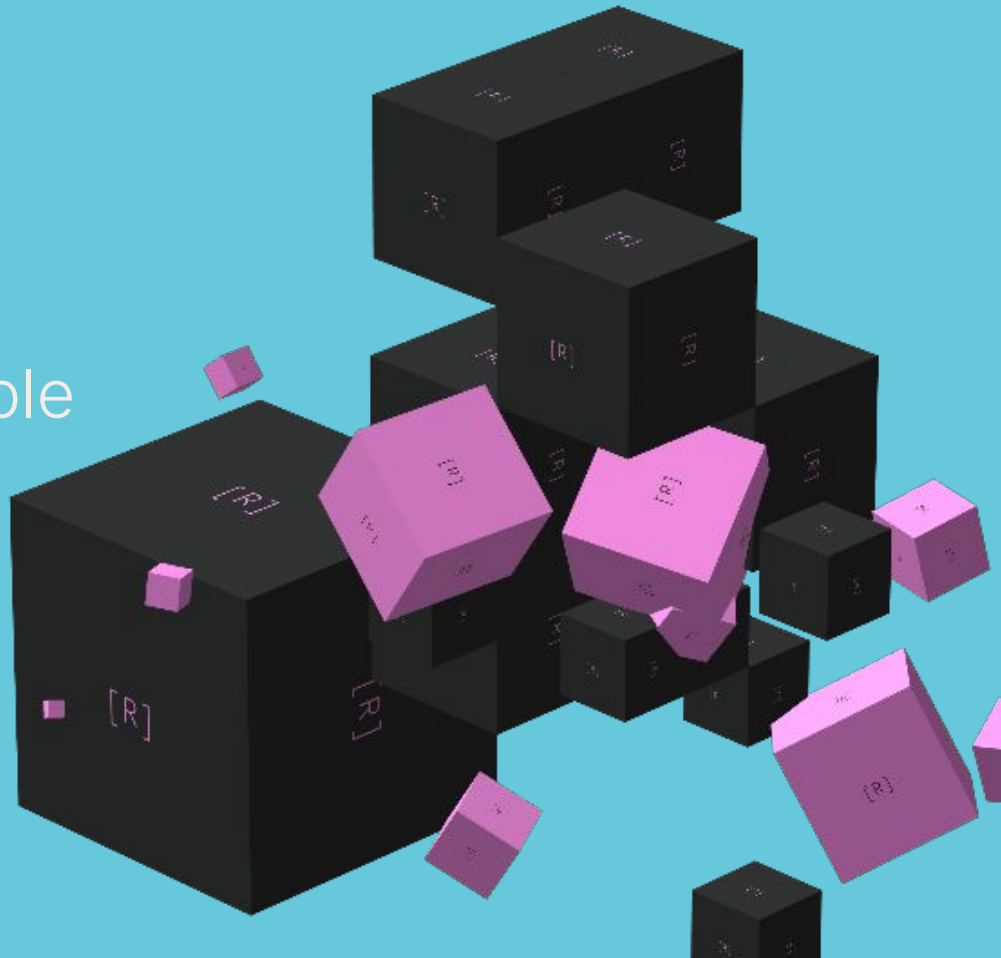
Control the source(s)

Only use sources that we found valuable

reka

Research

Knowledge made accessible



Reka Research is an agentic AI that answers complex questions by browsing the **web** and **private documents**

It excels at **synthesizing information from multiple sources**, performing work that usually takes **hours** in **minutes.**

Core differentiators

Best in class: state-of-the-art performance at a lower cost basis.

No vendor lock-in: API that is compatible with OpenAI and other providers with a similar format.

Optimize for your business metrics: work with our forward-deployed engineers to use our proprietary reinforcement learning technology to optimize on your business goals.

Key Features

Lightweight multi-hop question answering

Reka Research can perform multiple web searches and visit dozens of websites in just 1-3 minutes, overcoming the limitations of shallow search without the massive overhead of deep research.

Google Drive integration

[coming soon to API]

Connect Reka Research to Google Drive to access knowledge from internal documents.

Transparent agentic reasoning

Reka Research thinks before taking each action, and every answer comes with a traceable path of the steps taken.

Grounded answers with citations

All answers are grounded in reputable sources, with inline citations that point to the exact source of each piece of information.

Optimized end-to-end

Reka Research was trained from scratch and optimized end-to-end through reinforcement learning to maximize the successful task completion rate.

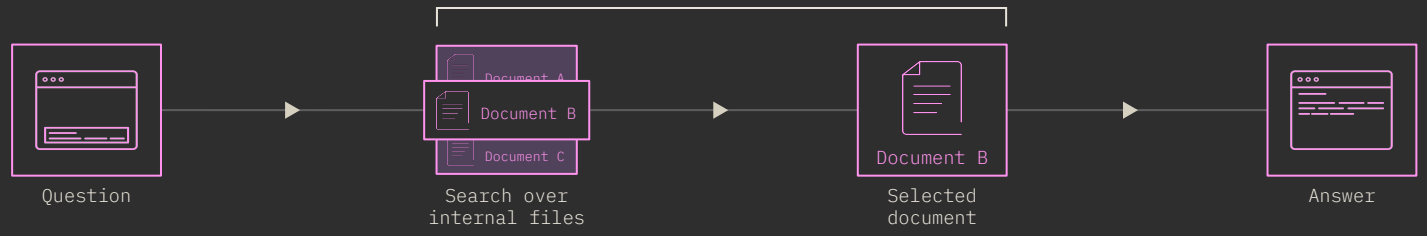
Workflow

Ask any question

Reka Research autonomously searches **the web** and **connected internal files** to synthesize answers from multiple sources.

Report with **explainable reasoning traces** and **cited sources**

Traditional PAG (One step)



Deep Research (Multi step)
